Outline

– Japan’s productivity performance

– Some important drivers of productivity
  • Globalisation - Engagement in global value chains
  • Investment in knowledge, upgrading and competitiveness
  • The role of entrepreneurship
  • Other key drivers: human resources, science, innovation and ICT

– Conclusions
Japan’s income gap is primarily due to low productivity levels.

Differences in GDP per capita levels compared with OECD average, 2012

OECD-WTO database on Trade in Value Added

- Global Input-Output Model: national IO tables linked by bilateral trade statistics
- Based on official statistics
- Large and growing coverage
  - 57 countries (all OECD, BRIICS, SE Asia)
  - > 95% of GDP, > 90% of world trade
  - China; distinction between processing and non-processing trade
- First release (of results) on 16 January 2013 – second release at OECD Ministerial Meeting (May 2013)
- Trade flows in value added and applied indicators
- Further work: employment and skills, income, firm heterogeneity...
For a large economy, Japan is a strong participant in global value chains, 2009 …

.. in particular in some sectors

... in particular in heavy and high-tech manufacturing, 2009

A growing share of value creation in trade is due to services, especially business services (Services value added embodied in manufacturing exports, 1995 and 2009)

… and Japan has lost ground as a manufacturing exporter, also in value added terms.

Percentage shares of total world manufacturing goods, 1995 and 2009

Employment in Japan has benefited from engagement in GVCs …

Jobs in the business sector sustained by foreign final demand, 1995 and 2008
As a percentage of total business sector employment

... with demand from many regions affecting jobs in Japan

Jobs sustained by foreign final demand, by region of demand, 2008
As a percentage of total jobs embodied in foreign final demand

GVCs: what they mean for policy

• **Trade and investment:**
  - GVCS depend on the easy/smooth circulation of productive resources
  - No more mercantilism: GVCs are about imports and exports;
  - Barriers to import = tax on exports
  - Trade facilitation + efficient services

• **Competitiveness:**
  - Competitiveness is about activities instead of industries: in GVCs, what you do (the value you create) matters more than what you sell.
  - Competitiveness depends on exports and imports; offshoring and outsourcing can reinforce competitiveness.
  - The manufacturing of goods remains core in GVCs but is increasingly dependent on efficient services that enable customisation to demand.
The role of innovation for upgrading in global value chains
Value creation in global value chains is often linked to knowledge and services.

The smiley curve; value creation in the value chain

What is knowledge-based capital (KBC)?

Computerised information

Innovative property

Copyrights, patents, trademarks, designs
Japan is a strong performer in IP, though mainly in patents
(IP bundle of top applicants, 2010-2012)

What is knowledge-based capital (KBC)?

(brand equity, firm-specific human capital, business networks, organisational know-how that increases enterprise efficiency, etc.)

Economic competencies
Knowledge based capital – adding value to production and enabling differentiation

Retaining value in GVCs: knowledge-based capital and the role of “sticky” factors

• Policies that can make value ‘stick’ to a location (or country), e.g.:
  – Quality of institutional and policy frameworks
  – A sound business environment, adapted to the growing importance of investment in knowledge, i.e. beyond R&D
  – Sufficient public investment in skills, research, infrastructure – possibly with some strategic choices
  – Strong domestic capabilities, including a strong SME supplier base
  – Links between stages of the value chain, e.g. R&D, design, production, services, etc. – enabling the co-location of activities
  – Efficient support for innovation and entrepreneurship
  – The social fabric of society (ability to change)
  – Services, but with a strong link to manufacturing
Entrepreneurship - How does Japan compare?
Where are the new opportunities coming from? Young firms …

The contribution of firms to job creation, average over 15 countries, 2001-2011

http://dx.doi.org/10.1787/888932889383
… independent of their size …

... and regulation could be further improved

Scale of 0 to 6 from least to most restrictive

Policies to enable entrepreneurship

- **Allow for experimentation**: Reduce barriers to the entry (e.g. administrative regulation), growth (e.g. size-specific regulations), and exit/failure of firms (e.g. penalising bankruptcy legislation).

- **Level the playing field for new and innovative firms**: Some policies may end up favouring incumbents and MNEs, that often also have greater influence on policy making.

- **Strengthen the innovation system for young and innovative firms**, e.g. through enhanced access to (risk) capital, network development, mentoring of entrepreneurs, skills development, further improvement in technology transfer from universities and PROs, etc.

- **Policies for SMEs are not the same as policies for young firms.**
How does Japan compare on some key drivers of growth – human resources, science, innovation and ICT?
Human resources are a concern …

Drivers of growth

• **Human resources:**
  – A major concern for the future, with low participation of women and rapid ageing

• **Science:**
  – Strong public investment, but quality could be further improved
  – Little international mobility of scientists, little international cooperation

• **Innovation:**
  – Strong investment in R&D – but will need to be turned into growth
  – Support for business R&D: some redesign?
  – Lack of internationalisation of innovation, little cooperation

• **ICT:**
  – Big data recognised as future driver
  – But Japanese firms don’t use ICT yet to its full potential
  – Strong in hardware, but little presence in services
In sum: some key issues for Japan

• **Global Value Chains:**
  – Performance has deteriorated, services content is relatively low and has not increased in recent years
  – GVCs are highly dynamic – preparing for their future evolution

• **Entrepreneurship:**
  – Risk capital and regulation
  – Some strong SMEs – but a sufficiently strong role of young firms and sufficient structural change to develop new areas of strength?

• **Innovation and investment in knowledge:**
  – Reflect on necessary policies for full range of investments in knowledge
  – Human resources a major concern
  – Scientific research could be strengthened
  – Lack of internationalisation
  – ICT – services and applications are lagging
