

The International Use of the Renminbi: Evidence from Japanese Firm-Level Data

**RIETI-IWEP-CESSA JOINT-WORKSHOP
RMB INTERNATIONALIZATION
14 DECEMBER 2015**

Kiyotaka Sato & Junko Shimizu

Motivation

- The use of the Chinese renminbi (RMB) has been increasing in recent years for trade invoicing, due to active promotion policies by the Chinese government.
- Since China plays a role of regional and global manufacturing hub and **foreign multinational companies (MNCs) actively operate in China**, it is necessary to investigate to what extent MNCs use RMB for trade invoicing especially in their **intra-firm trade**.
- However, no firm-level empirical evidence has been presented.

This Paper's Contribution

- Utilizing the firm-level information obtained by the large-scale questionnaire surveys in 2010 and 2014, this study presents the new evidence of the use of RMB by Japanese MNCs operating in China and ASEAN countries.
- We found the following results:
 - Although RMB is extensively used for local sales and procurement in China, Japanese MNCs in China mainly use the U.S. dollar and yen in trade with other countries.
 - Japanese MNCs in China increased **the use of RMB in intra-firm trade with Japan.**
 - The RMB transactions will be growing further if it becomes easier for MNCs to conduct marry and netting for their trade settlement.

CONTENTS

- Overviews of RMB internationalization
 - Difference in Internationalization between Yen and RMB
- Questionnaires Surveys of Japanese Overseas Subsidiaries
 - What Impedes RMB Transactions
- Invoice Currency Choice in Japanese Production Subsidiaries
 - Share of Invoice Currency in Asia
 - Share of Invoice Currency in Intra-Firm Trade
- Concluding Remarks

RMB internationalization

- Many policy reforms aimed at increasing the use of RMB in cross-border transactions have been implemented by Chinese government.
- At the same time, the RMB related deposits, bonds, and derivatives in offshore markets have been expanding.
- Accordingly, the RMB internationalization has been promoted by both **policy-driven efforts** and market-driven forces.
- According to Eichengreen and Kawai (2014), the RMB internationalization has started by **focusing the use of the currency for trade-related purposes**.

Recent RMB internationalization Policies

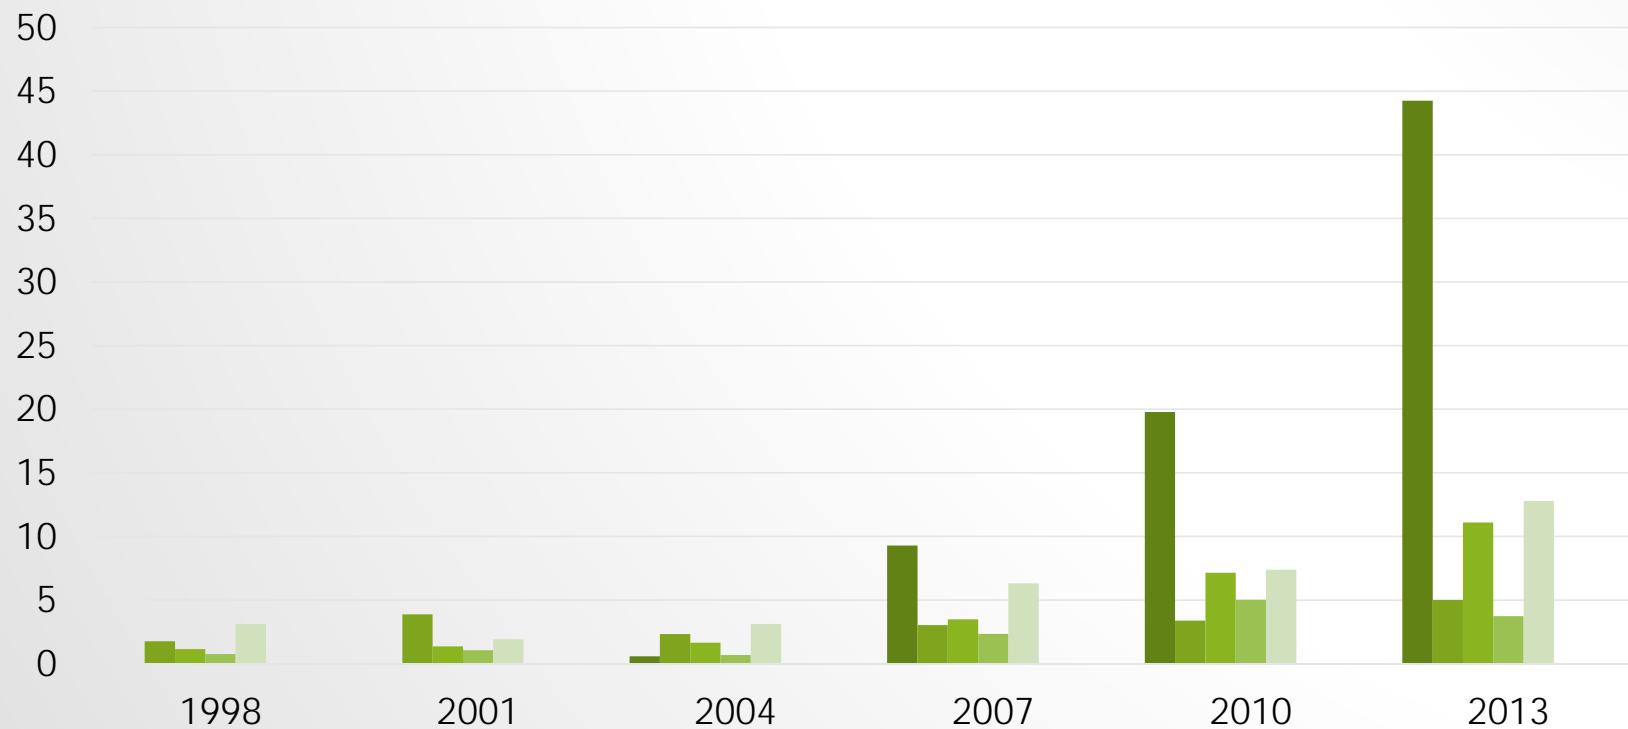

- **Bilateral currency swap agreements with various countries**
 - To provide RMB liquidity for trade and direct investment
 - 32 swap arrangements with worldwide foreign central banks (As of May 2015)
 - Promote cross-border trade and direct investment in RMB

- **Pilot scheme for use of the RMB in trade settlement**
- **Direct RMB trading with non-US dollar currencies**
- **Offshore market RMB (CNH)**
- **Official RMB clearing banks** now appointed in 15 countries across Asia, Europe, Middle East, and North and South Americas (as of Nov 2015)

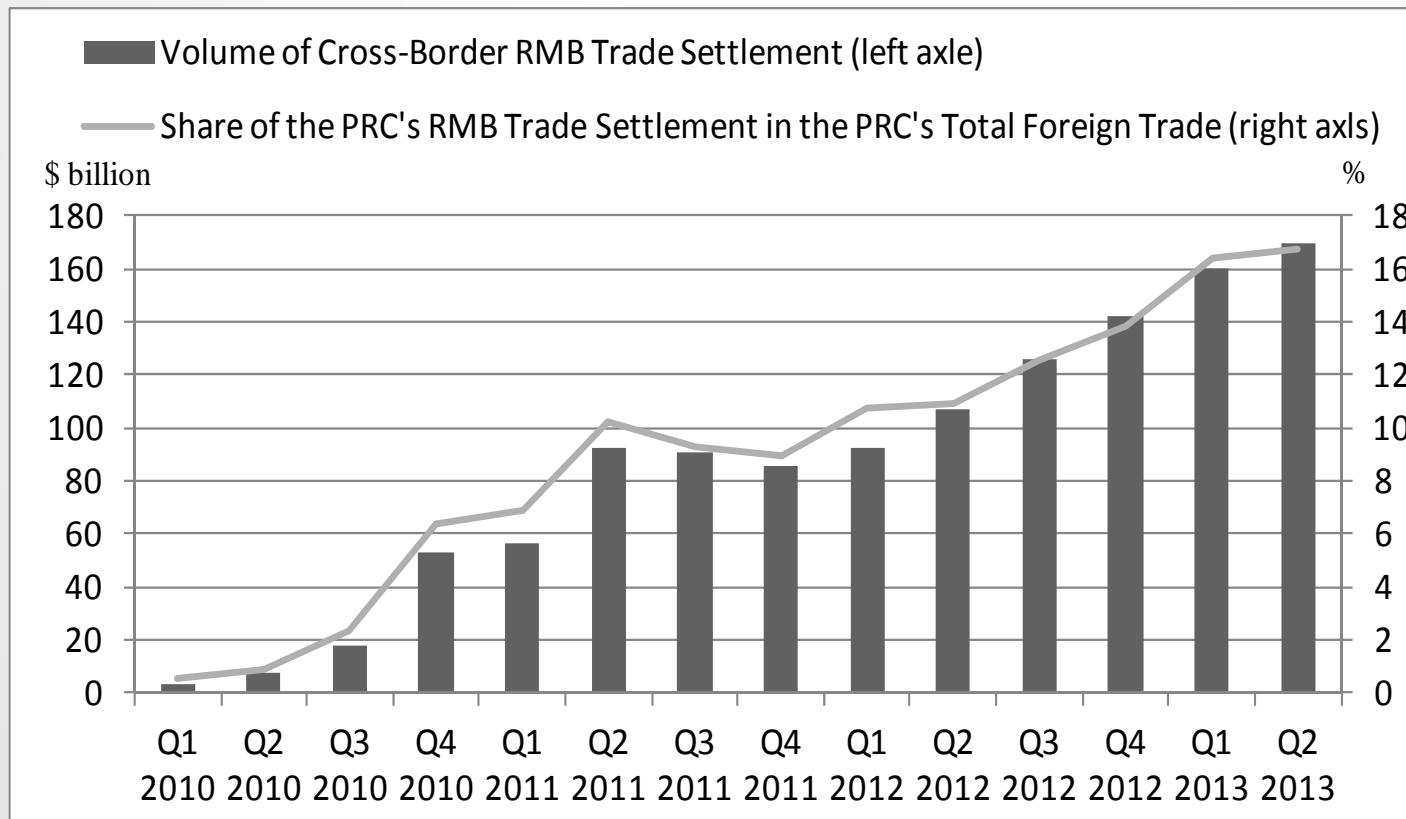

OTC Foreign Exchange Turnover (BIS, 1998-2013)

The Volume and Share of the RMB Trade Settlement

Sources: Eichengreen and Kawai (2014)

Data: CEIC, PRC Premium Database; International Monetary Fund, Direction of Trade Statistics.

Difference in Internationalization between RMB and Yen

- Since 2009, Bilateral currency swap agreements with various countries
- Pilot scheme for use of the RMB in trade settlement(2009)
- Offshore market RMB (CNH)
- Direct RMB trading with non-US dollar currencies
- Official RMB clearing banks

- 1960: Free Yen Accounts for nonresidents
- 1980: Amendment of Foreign Exchange and Foreign Trade Control Act
- 1984: Abolition of the real demand
- 1998:Amendment of Foreign Exchange and Foreign Trade Act

- ✓ Rapid and aggressive promotion
- ✓ Cross-border trade settlement
- ✓ Strong expectation of RMB appreciation

- ✓ Reluctant to internationalize the yen for trade settlement in the 1980s
- ✓ Convertibility and capital openness
- ✓ Prolonged stagnation of Japanese economy

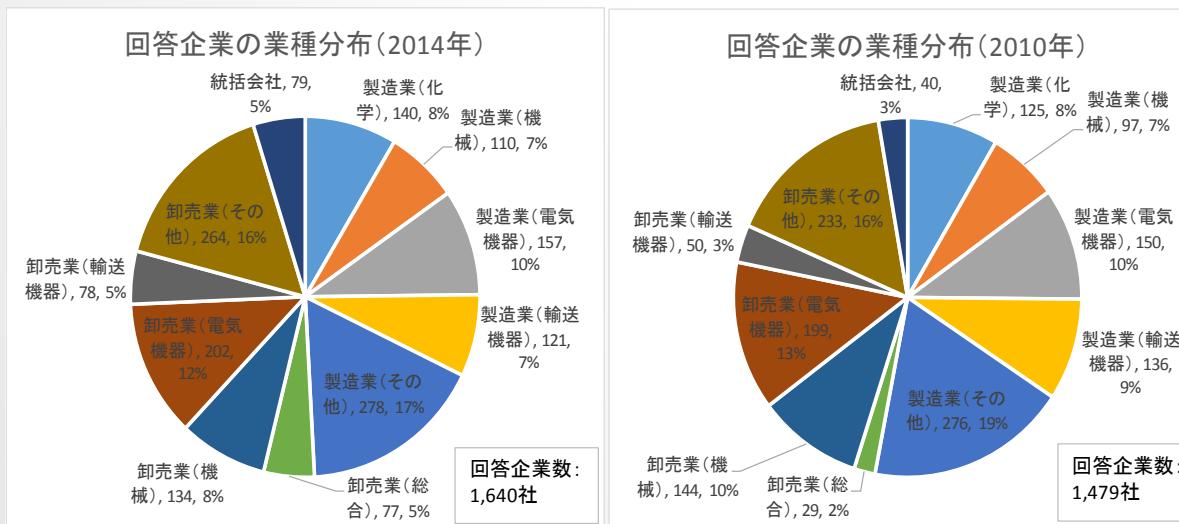

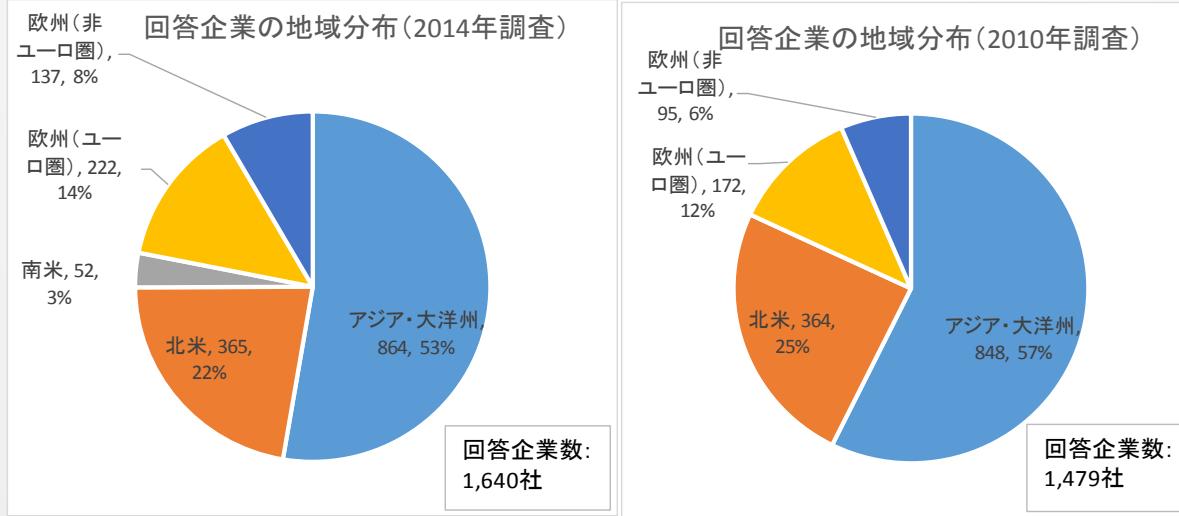

Questionnaire surveys of Japanese Overseas Subsidiaries in 2010 and 2014

- Subsidiaries are chosen from the Toyo Keizai's Overseas Japanese companies database (the “OJC database”).
- Questionnaire items focus on:
 - (i) exchange rate risk management of overseas subsidiaries.
 - (ii) the choice of invoice currency by source and destination, by trading partner (intra-firm or arm's length).

RIETI Questionnaire survey 2010:
Sent to 16,020 ⇒ 1,479 (9.2%)
Asia, Oceania, North America,
Europe

RIETI Questionnaire survey 2014:
Sent to 18,932 ⇒ 1,640 (8.7%)

Choice of Invoice Currency by Japanese Production Subsidiaries in Asia

- **Question:**
 - To what extent Japanese production subsidiaries use RMB for trade invoicing?
=> Subsidiaries operating in Asia (and especially in China).
- **2 types of invoicing data:**
 - Firm-level data (share):
 - (1) Local procurements/sales; Imports from and exports to (2) Japan and (3) other countries.
 - Product-level data (number of transactions):
 - (i) By trading partner (intra-firm trade or arm's-length trade)
 - (ii) By destination countries

Questionnaire Survey Data (2)

- [2] Product-level data:
 - We obtain the product-level information on top 3 products in each of 3 regions (Japan, local country and foreign countries).
 - Subsidiary's exports:
 - **Which product?** => Name of the export product.
 - “Intermediate input” or “Final consumption goods”?
 - “Homogeneous” or “Differentiated” products? (<= Rauch, 1999)
 - **Trading partner?** => “Intra-firm” or “Arm’s length” trade?
 - **Destination country?**
 - Subsidiary's imports:
 - We obtain the same information on “**which product?**” “**trading partner?**” and “**source country?**” in subsidiary's imports of intermediate goods.

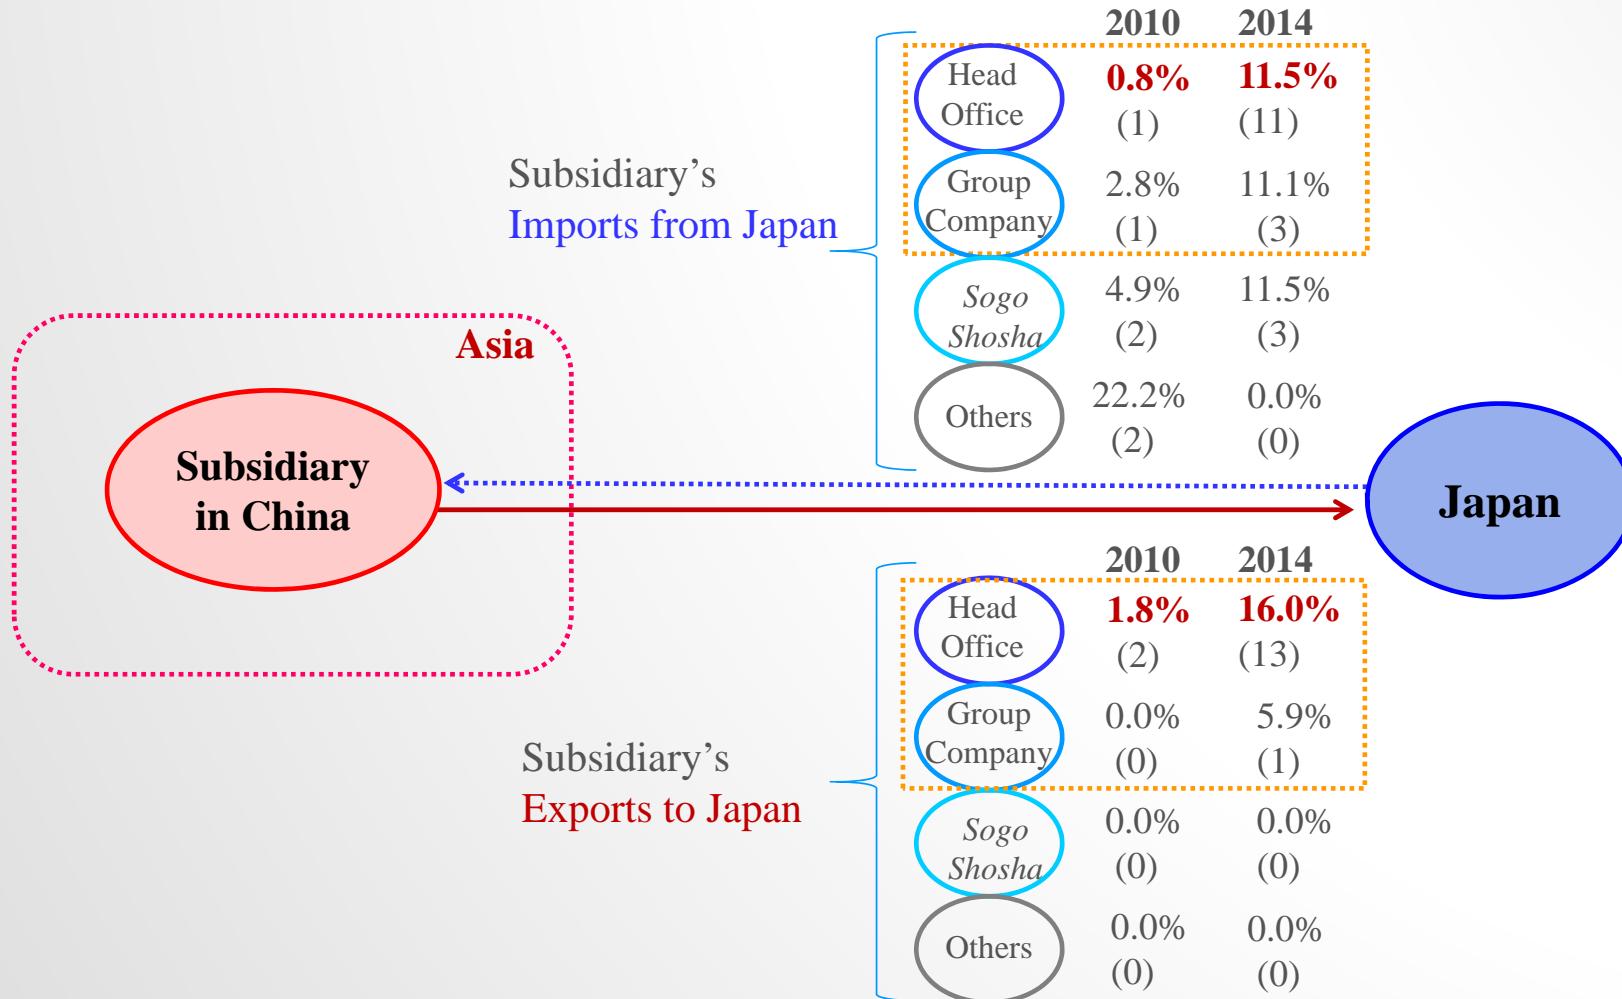

Case 2: Electronics Subsidiary in Taiwan

— “Product-level” Data on Invoice Currency —

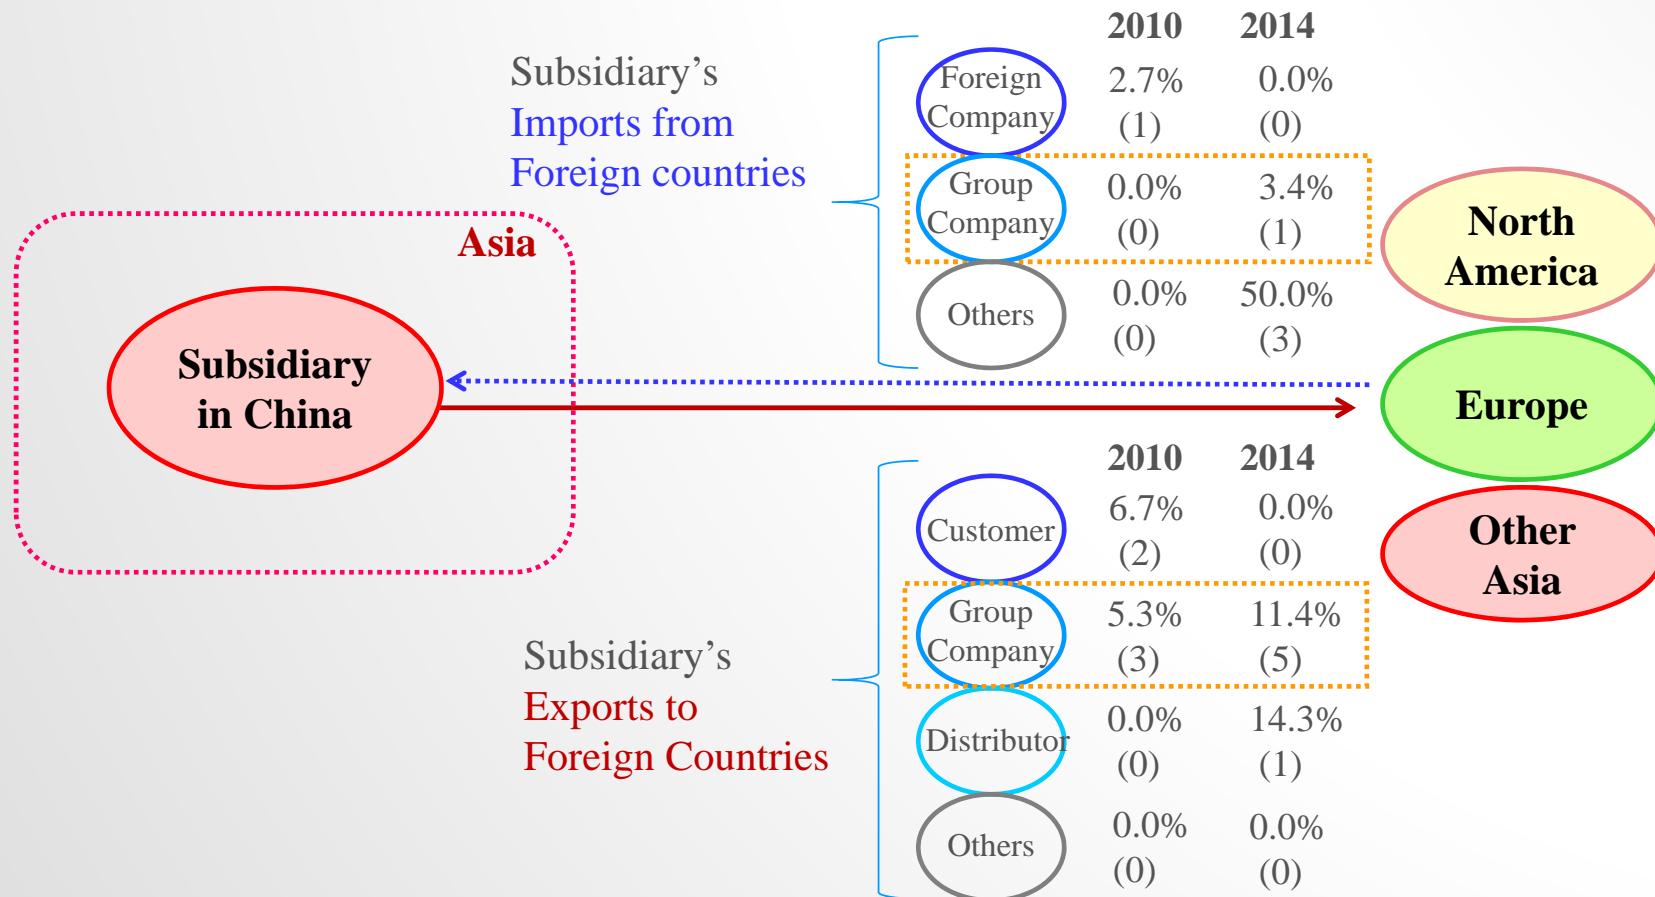

RMB Invoicing in Intra-Firm Trade

—Japanese Production Subsidiaries in China: **Trade with Japan**—

2014 Survey Data:

Invoice Currency Choice in Exports of Production Subsidiaries in Asia, in Greater China (Ch, HK, Tw), and in ASEAN6

Japanese subsidiaries in Asia, Greater China, and ASEAN6:

- In exports to foreign countries, **intra-Asian trade** accounts for the largest share.

Choice of invoice currency:

- 80 percent or more are invoiced in U.S. dollar.
- RMB is used only in Greater China area.

Concluding Remarks

- **Findings:**
 - Although RMB is extensively used for local sales and procurement in China, Japanese MNCs in China mainly use the U.S. dollar in trade with other countries. Yen is used mainly for trade with Japan.
 - Little evidence is obtained on the growing use of RMB in Japanese MNCs' international trade along the production chain in Asia. Possible exception is **intra-firm trade between China and Japan.**
- **Implications:**
 - RMB transactions started to grow gradually in intra-firm trade between China and Japan.
 - The RMB transactions will be growing further if it becomes easier for **MNCs** to conduct **marry and netting** for their trade settlement.
