

# A Consideration of the Financial System of the National Universities

## A Structural Analysis of Operating Grants

**AKAI Nobuo**

**RIETI Faculty Fellow/**

**Associate Professor, Osaka School of  
International Public Policy, Osaka  
University**

**Research collaborators: SENOH  
Wataru, NAKAMURA Yoshihiro**

# Background to this paper

- ◎ Starting in April 2004, the Japanese national universities became National University Corporations.
- ◎ All grants from the Ministry of Education, Culture, Sports, Science and Technology (MEXT) have been standardized as operating grants to be used freely.
- ◎ Since 2005, operating grants have decreased according to a uniform rule (decreases are expected to continue until fiscal 2009).
- ◎ Special educational research budgets are allocated on a competitive basis.
- ◎ **Starting in fiscal 2010 a results-based system** for decisions on allocation of operating grants will be introduced.
- ◎ **Regional universities are concerned about major cuts in operating grants.**

# Aims

- © **In considering Japan's future, the modality of universities as higher education and the modality of the country's governance (especially grants) are of the utmost importance.**
- © **While educational philosophy and the theory of human capital are debated, there is almost no analysis of educational finance.**
- © **The modality of grants to each university (should the allocation basis be efficiency or fairness?) has hardly been debated.**

# Content of this presentation

## **(1) Clarification of the operating grant system**

- ◎ **Finances after the transition to National University corporations**
- ◎ **Consideration of universities with affiliated hospitals**
- ◎ **Allocation of operating grants**
- ◎ **Special grant to enhance education and research**

## **(2) Analysis of factors for decisions on operating grants**

- ◎ **Students or faculty?**
- ◎ **Efficient or equitable?**

## **(3) Conclusions**

**(Addendum) Operating grants and existing performance indicators**

- ◎ **Education, research, social contribution, preliminary analysis**

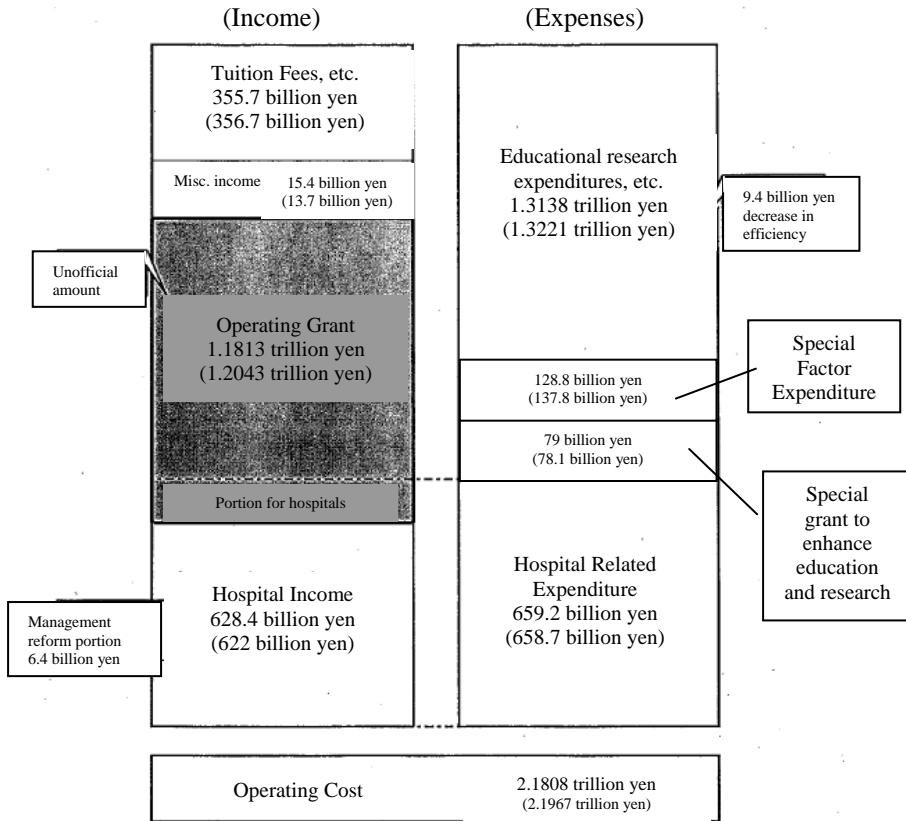

**<Remaining topics>**

**→ Information provision for a modality of effective fund allocation.**

# (1) Clarification of the operating grant system

## © Finances after the transition to National University corporations

Overview of Planned FY2008 Budget for National University Corporations  
(90 corporations including inter-university research institutes)

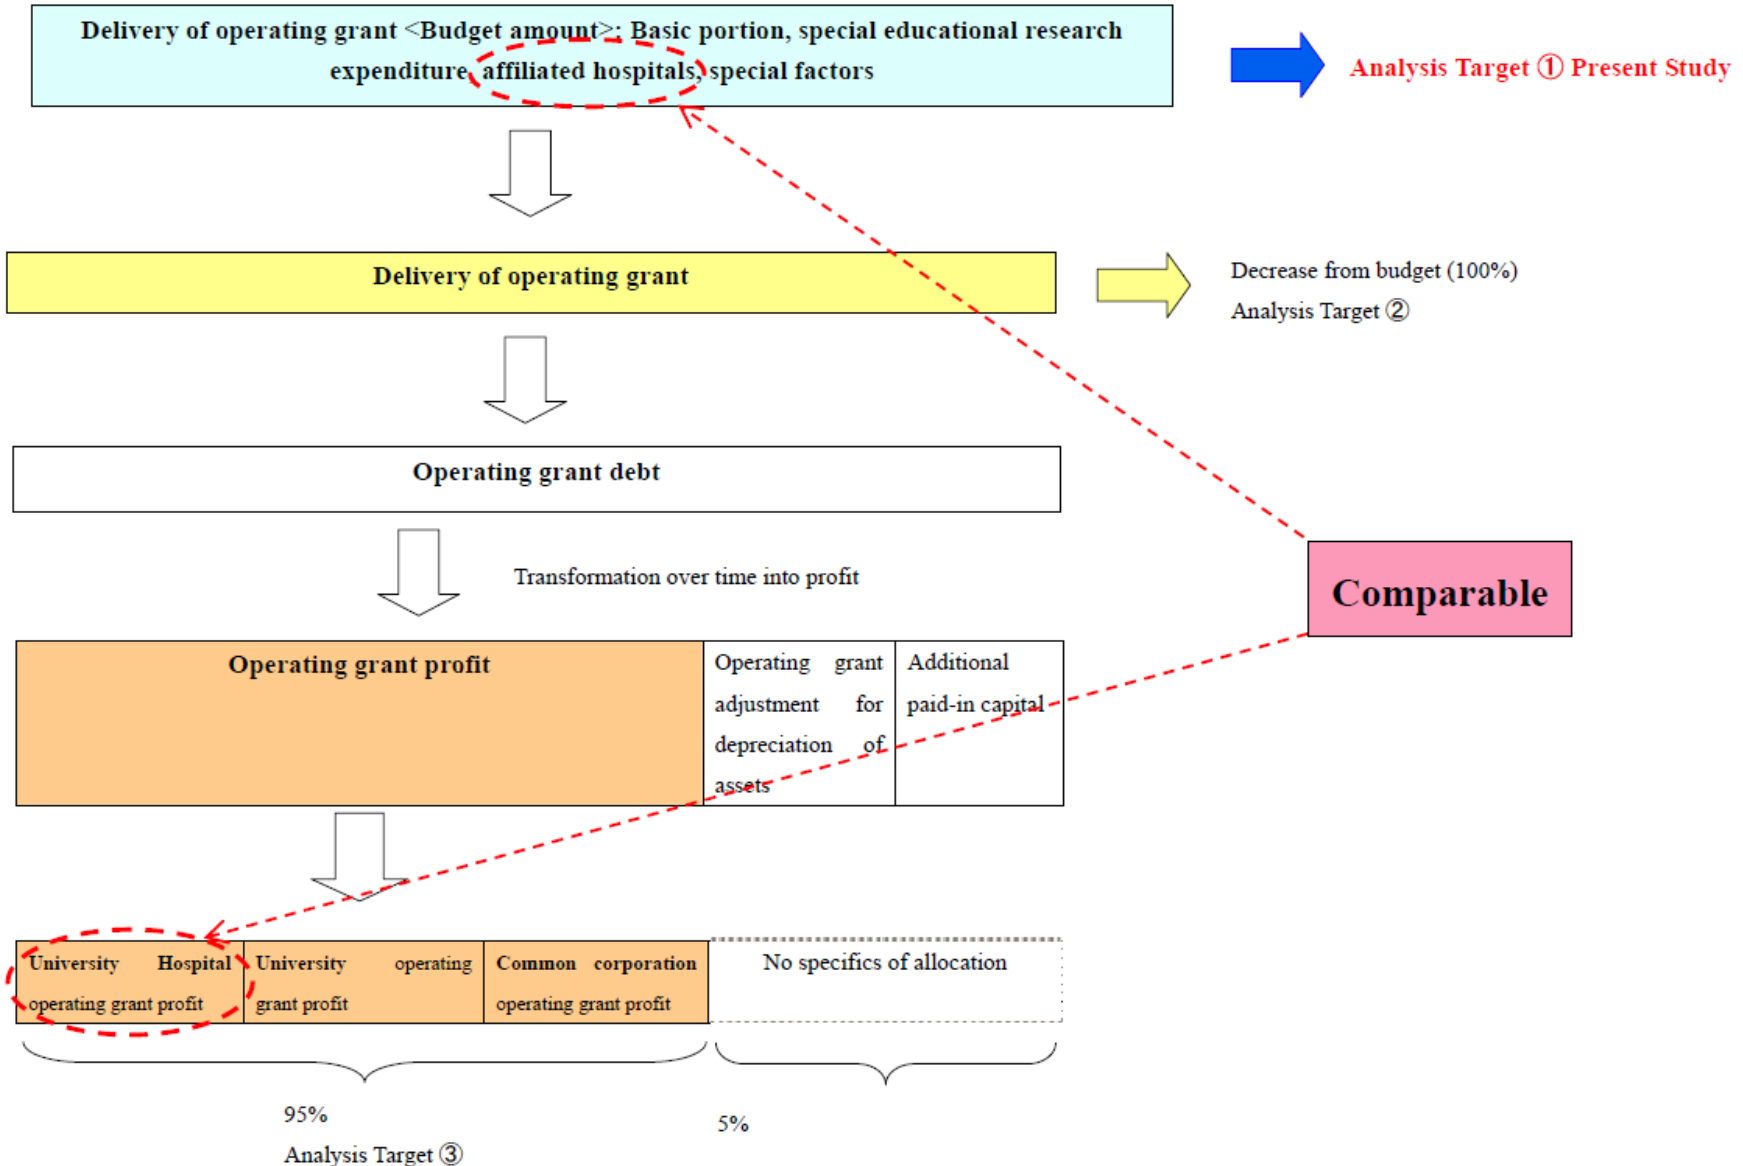

1. In this chart, outside funding (contract research income, income from donations, income from patent royalties, etc.) and other income that falls outside of the calculation for operating grants is not included.
2. Figures in parenthesis are the amount for the previous fiscal year.
3. Amounts for "Educational research expenditures, etc." and "special grant to enhance education and research" for the previous fiscal year are partially combined.

Structure of Planned FY2008 Budget for National University Corporations  
(90 corporations including inter-university research institutes)

1. In this chart, outside funding (contract research income, income from donations, income from patent royalties, etc.) and other income that falls outside of the calculation for operating grants is not included.
2. Figures in parenthesis are the amount for the previous fiscal year.
3. Amounts for "Educational research expenditures, etc." and "special grant to enhance education and research" for the previous fiscal year are partially combined.

# Flow of accounting procedures for operating grants and analysis

Unit: ¥1000	University	Budget	Grant amount	Final account	Budget—Grant amount	Budget—Final account	Grant amount—Final account	Budget	Final account	Budget—Final account	Budget	Final account	Budget—Final account

\* Data for Toyama University is not included in the comparison due to difficulties in adjustment.

# © Consideration of universities with affiliated hospitals

## Rules for calculating operating grants for university-affiliated hospitals

- **Operating grant for university-affiliated hospital (budget) =**
  - General physician expenditure (fixed in fiscal 2004 budget) - Income of affiliated hospital**
  - + Special factors expenditures for affiliated hospital + Expenditure for payback of obligations**
  
- **Income of affiliated hospital = Income of affiliated hospital one fiscal year earlier (budget)**
  - + Administrative reform amount (2% of estimated amount for fiscal 2004 affiliated hospital revenue)**
  
- **Affiliated hospital operating grant profit (final account)**
  - The results of projects carried out using operating grant obligation entrusted by the government are dissolved obligation profit.**

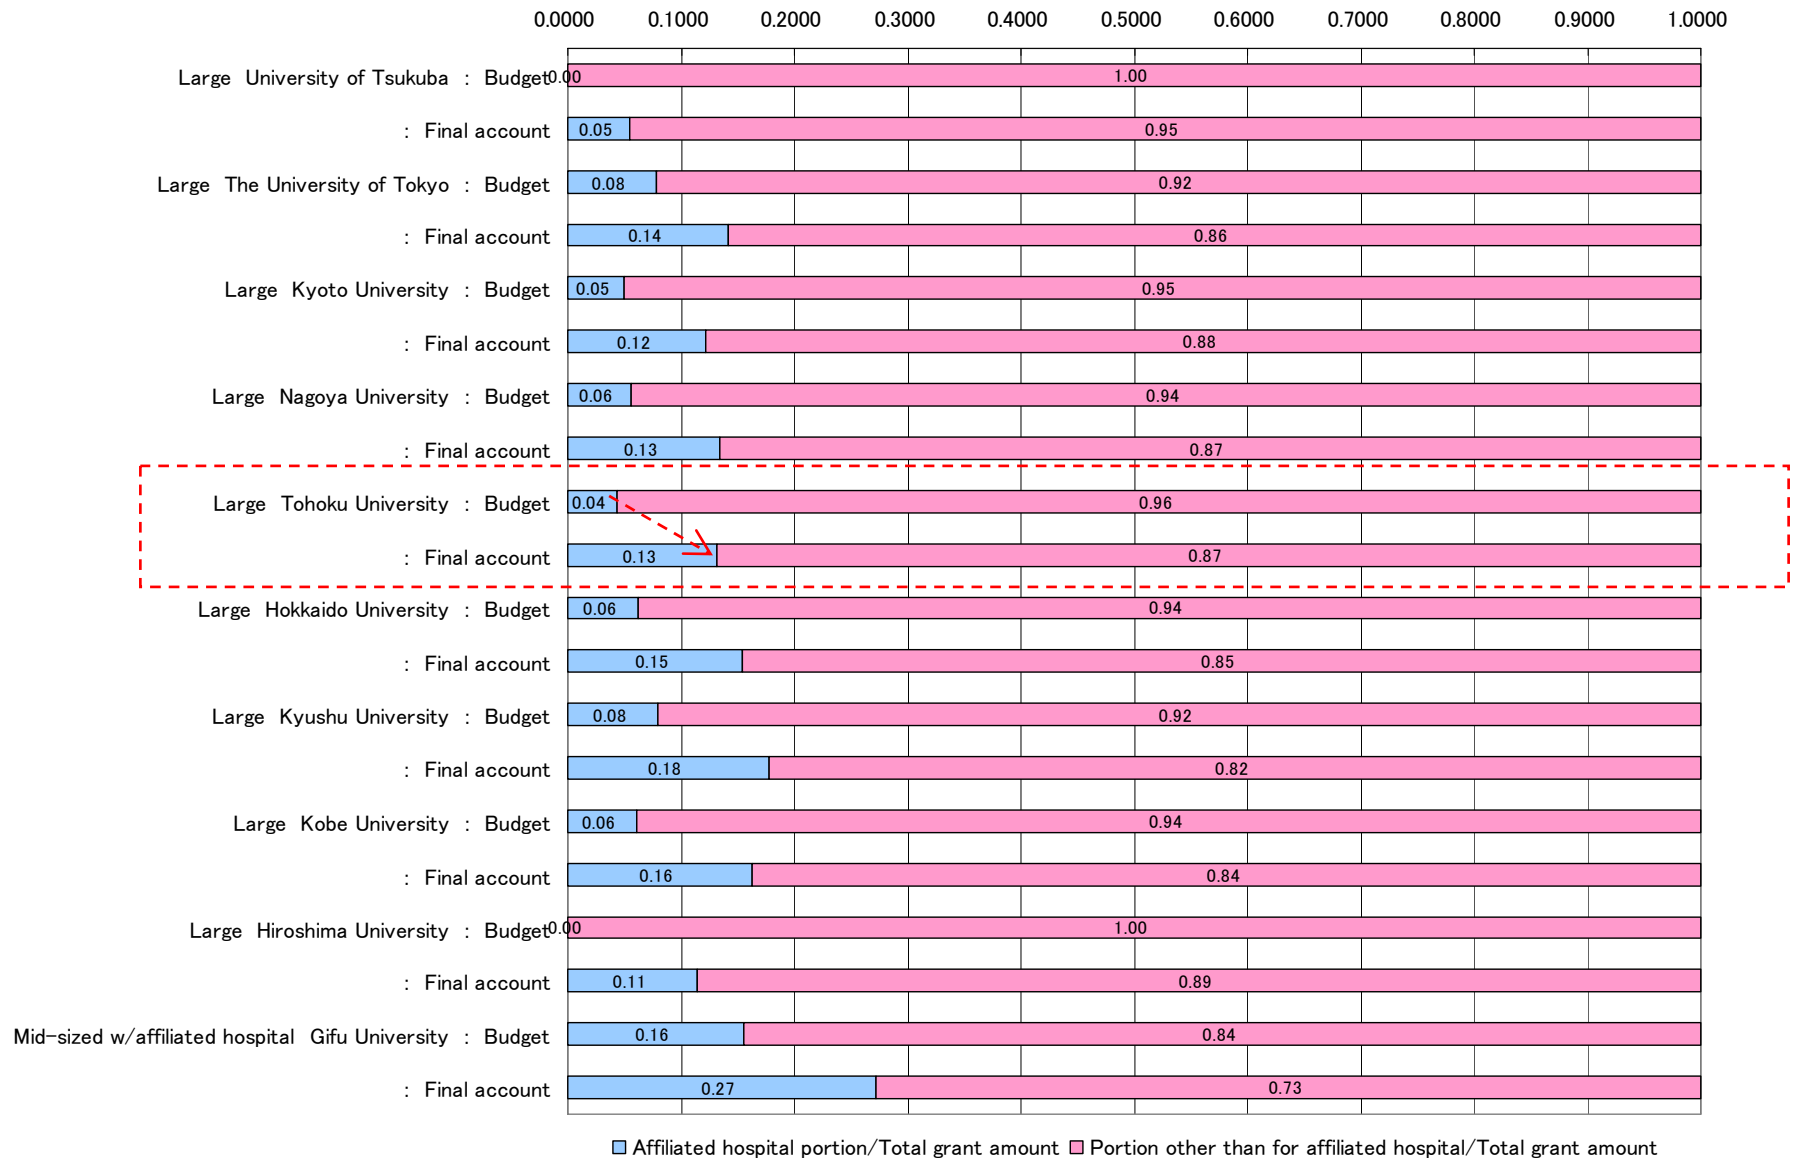

# Affiliated hospital and other grants (macro chart)

Comparison of Budget and Final Account Taking into Consideration  
Portion of Operating Grant Allocated for Affiliated Hospital (2006)

# Comparison of Operating Grant Budget and Final Account for Affiliated Hospital Portion and Non-Hospital Portion ① (2006) In ascending order of increase from budget to final account

# Comparison of Operating Grant Budget and Final Account for Affiliated Hospital Portion and Non-Hospital Portion ② (2006) In ascending order of increase from budget to final account

## Comparison of Operating Grant Budget and Final Account for Affiliated Hospital Portion and Non-Hospital Portion ③ (2006) In ascending order of increase from budget to final account

# Comparison of Operating Grant Budget and Final Account for Affiliated Hospital Portion and Non-Hospital Portion ④ (2006) In ascending order of increase from budget to final account

## Summary of Comparison of Grants Taking into Account Affiliated Hospitals

- **Macro: Comparing the budget and final account for grants, affiliated hospital grant (budget) < affiliated hospital grant profit (final account)**
  - **Micro: Budget < Final account in the approximate order of Large < Mid-sized with affiliated hospital < Medical universities. For single-department medical universities, the difference between the amount allocated and the amount that became income is large.**
- **Because hospital related expenditures (personnel expenditures, educational/research expenditures) included in the basic grant (budget) are included in the operating grant income for affiliated hospitals, it is not possible to simply compare the budget and final account.**
- **Adjustment for accounting differences requires increased transparency of contents.**

# Consideration of Changes in Affiliated Hospital Income

In calculation of grants, a 2% increase in income is assumed ->  
Verify!

## Affiliated hospital profit (PL)

→ Profit defined as receivables from providing medical care (because treatment from April to March is reported, this includes insurance claims that will be collected the following fiscal year).

## Affiliated hospital income (cash flow statement)

→ Indicates how much funding was attained through affiliated hospital affairs.

© Below, the amount of affiliated hospital profit is analysed as a final amount.

© Important to note that income  $\neq$  profit .

## Percent Change from Previous Fiscal Year for Affiliated Hospital Profit (Large universities)

■ Rate of increase in Affiliated Hospital Profit from previous fiscal year (2005) 
 ■ Rate of increase in Affiliated Hospital Profit from previous fiscal year (2006)

# Percent Change from Previous Fiscal Year for Affiliated Hospital Profit

## (Mid-sized universities with affiliated hospital)

# Percent Change from Previous Fiscal Year for Affiliated Hospital Profit (Medical universities)

# Summary of Percent Change from Previous Fiscal Year of Affiliated Hospital Profit

- Looking at the percent change from the previous fiscal year in affiliated hospital profit, we see that **most universities are achieving over 2% growth.**
  - Depending on the university, some achieve over 2% growth two years in a row. However, some **cannot maintain growth in consecutive years**, while others actually **reverse growth.**
- 
- ◎ **The incentives for 2% increase in income is working.**
  - ◎ **There is a need to clarify the basis and handling of accounting for this 2%.**
  - ◎ **However, expenditures are increasing along with the increase in income (increase in medical services provision) and it is not clear whether or not management efficiency is improving.**

# Consideration of Changes in Medical Service Expenditure

**In calculation of grants, assumed to be same amount as previous year  
⇒ Verify!**

**General medical service expenditures (budget) (used in calculation of grants)**

**Medical service expenditure (final account)**

**Different concepts.**

**⇒ © Below, changes in the amount of medical service expenditure is analysed.**

## Percent Change from Previous Fiscal Year for Affiliated Hospital Profit and Physician Expenditure and Rate of Improvement (Large universities, 2006)

- Rate of increase in Affiliated Hospital Profit from previous fiscal year
- Rate of increase in medical service expenditure from previous fiscal year
- Improvement rate

## Percent Change from Previous Fiscal Year for Affiliated Hospital Profit and Physician Expenditure and Rate of Improvement (Mid-sized universities with affiliated hospital, 2006)

- Rate of increase in Affiliated Hospital Profit from previous fiscal year
- Rate of increase in medical service expenditure from previous fiscal year
- Improvement rate

## Percent Change from Previous Fiscal Year for Affiliated Hospital Profit and Physician Expenditure and Rate of Improvement (Medical universities, 2006)

- Rate of increase in Affiliated Hospital Profit from previous fiscal year
- Rate of increase in medical service expenditure from previous fiscal year
- Improvement rate

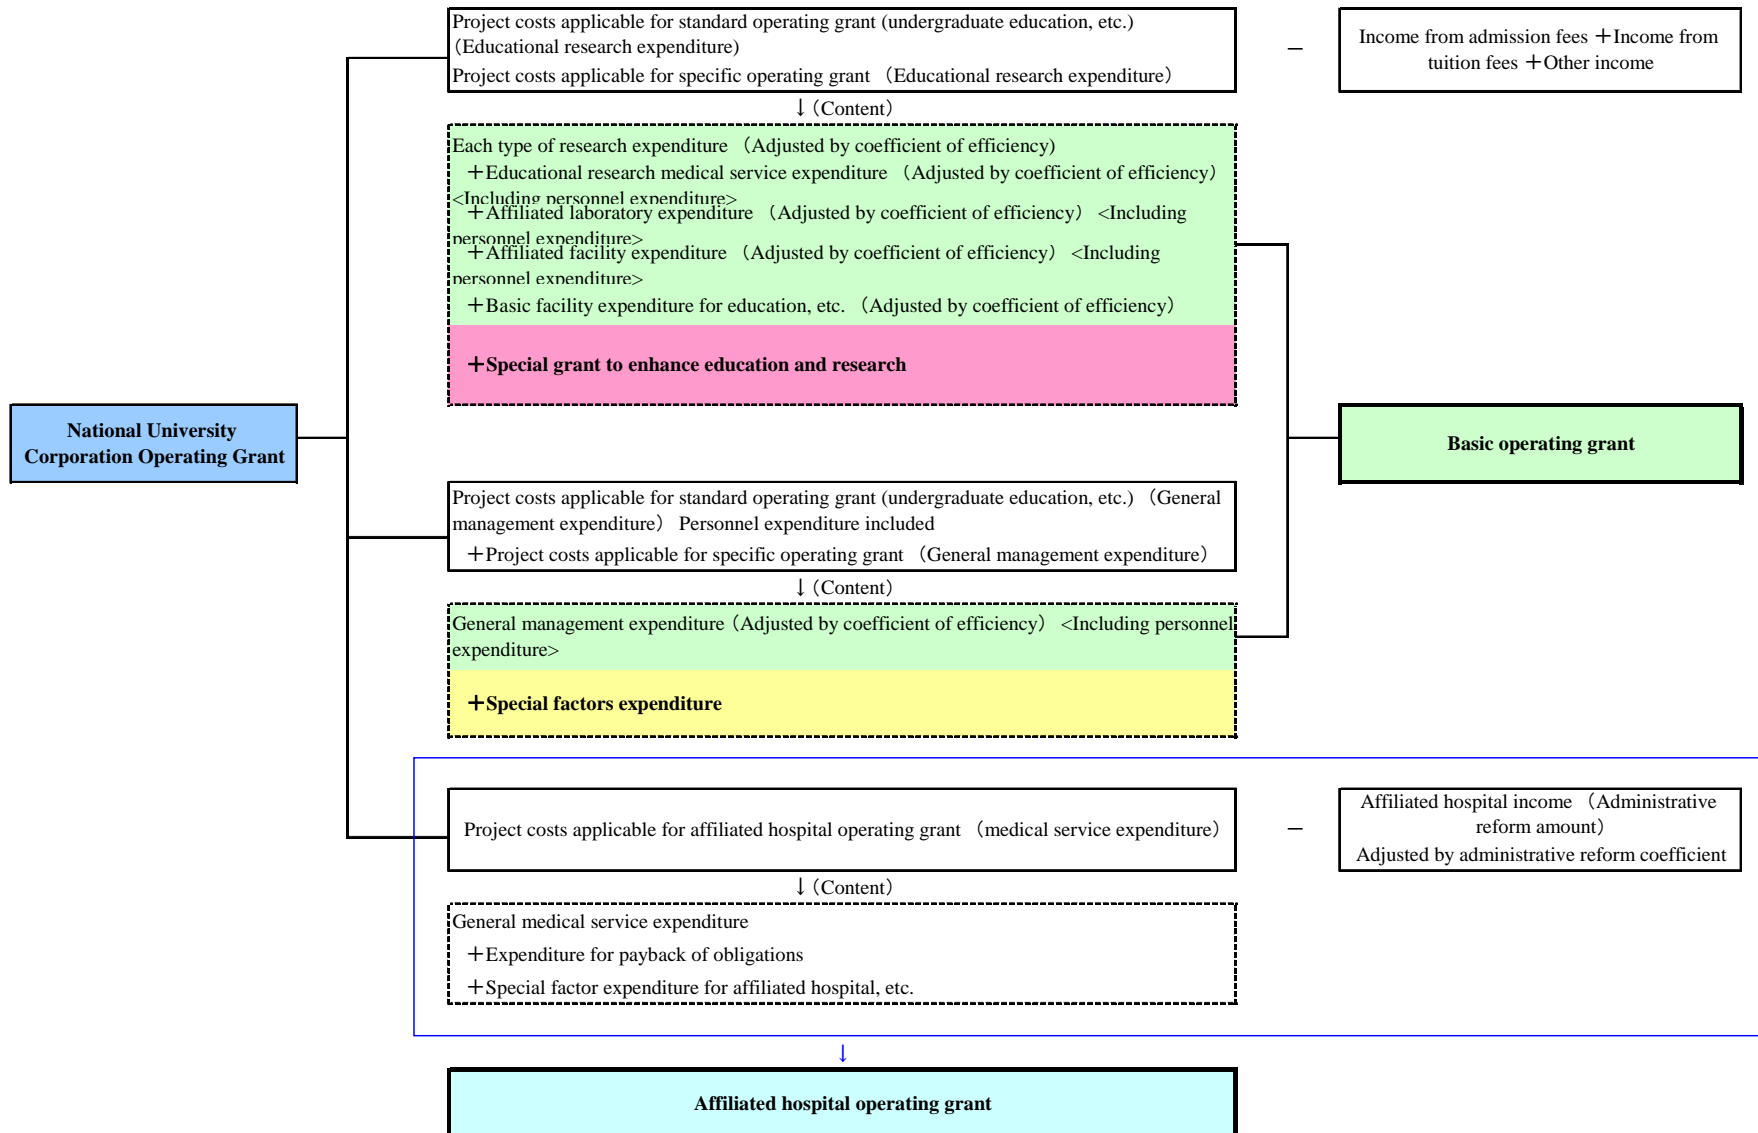

# Summary of Percent Change from Previous Fiscal Year of Affiliated Hospital Profit and Medical Service Expenditure

- Although affiliated hospital profit is increasing for virtually all universities, there is wide dispersion in increases and decreases in medical care expenditure.
- It is possible that gaps in the management status of university hospitals are appearing as a result of each university's local circumstances.
- **Summary (Overall)**
- **Assumptions made in budget calculations (fixed expenditure, 2% increase in income) are not necessarily being met.**
- **= > There is a need for ingenuity in budget calculation in the future.**

# © Operating Grant Allocation

## Mechanism for grant calculation

## © Special grant to enhance education and research

- **Competitive portion** of operating grants (6~7%)
- Allocation according to an **application and review method**.
- Overview of fiscal 2007
- **Purpose:** To provide focused support to ambitious efforts tailored to the individual nature of each university of other educational institution that meet the needs of new educational research.
- **Estimated amount:** approx. ¥84.5 billion (¥84.488 billion) (80.049 in previous fiscal year)
- **Portion for continuing projects:** ¥60.788 billion
- **Portion for new projects:** ¥23.710 billion
- **70%** of the total amount goes to continuing projects

## **(2) Analysis of factors for decisions on operating grants**

**(1): Are operating grants determined according to the number of faculty members or the number of students in a university?**

**→ In general, they seem to be determined according to the number of faculty members.**

**(2): What are the factors for decisions on the competitive portion and Special grant to enhance education and research?**

**(3): Are there other relationships with operating grants?**

**→ In terms of a substitution relationship, one could probably describe the allocation as emphasizing equitability.**

# © Students or faculty?

## Case 1: Without corporate dummy

- **Target of analysis: 85 national university corporations, 2004-2006**
- **Data: Taken from "Financial Analysis of All National Universities in Japan." Jibu et al. 1st Policy-Oriented Research Group, National Institute of Science and Technology Policy (NISTEP), Ministry of Education, Culture, Sports, Science and Technology (MEXT). (Jan. 2008)**

○ **Explained variable: Operating budget**

**Basic portion; competitive portion, total amount**

○ **Explanatory variable: number of faculty members or number of students**

## Case (2) With Corporate Dummy

### ○ Corporate dummy variable

**D1: Large universities (13 corporations)**

**D2: Mid-sized universities with affiliated hospital (24 corporations)**

**D3: Medical universities (4 corporations)**

**D4: Mid-sized universities without affiliated hospital (9 corporations)**

**D5: Science and engineering focused universities (13 corporations)**

**D6: Liberal arts focused universities (7 corporations)**

**D7: Education universities (11 corporations)**

**D8: Institutes for graduate study (4 corporations)**

- Refer to "Financial Analysis of All National Universities in Japan" for information on corporation types.

# Summary of Results of Analysis

## Result: Case without dummy

© In all estimates, both the number of faculty and the number of students had a significant positive relationship.

© “Basic portion,” “competitive portion,” “total amount”

There was a relatively strong relationship for “basic portion”

© Number of faculty or Number of students

There was a relatively strong relationship for “number of faculty”

## Result: Case 2 with dummy

© Essentially the same trend

# © Efficient or Equitable?

Factors determining grant content: substitute, complementary relationship

© Factors determining Special grant to enhance education and research (competitive)

Case	Explained variable	Explanatory variable of interest
1	Special educational research expenditure	Special educational research expenditure for previous fiscal year
2	Special educational research expenditure per faculty member	Special educational research expenditure per faculty member for previous fiscal year
3	Special educational research expenditure per student	Special educational research expenditure per student for previous fiscal year

Other explanatory variables are breakdown of operating grant, basic grant, affiliated hospital, and special factors. Target of analysis: 85 national university corporations from 2004 to 2005.

# Results

Special grant to enhance education and research		
	Coefficient	P-value
Constant	10800000000	0.000***
Basic portion	-0.9356	0.000***
Affiliated hospital expenditure	-0.0030	0.986

Affiliated hospital expenditure/No. of students	0.3181	0.101
Special factors expenditure/No. of students	0.1056	0.007***
Special educational research expenditure(-1)/No. of students(-1)	-0.2072	0.039**
Adjusted R-squared	0.6899	

\*\*\*, \*\*, \* means significant at the 1, 5 and 10 percent levels, respectively.

# Summary of Results of Analysis

- **Negative relationship with special educational expenditure of previous fiscal year**
  - **Substitution relationship**
  - **The result: equitable allocation.**
  - **However, taking into consideration that the duration of research projects extends over multiple fiscal years, an analysis that considers those fiscal years is probably necessary.**

### (3) Conclusions

#### Allocation relationship of Special grant to enhance education and research (Competitive allocation portion)

- ◎ From the estimated result, we see that there is a **mechanism that allocates expenditure this year to areas where allocation the previous year was low**. In other words, it is possible that the national government **has leeway in allocation of Special grant to enhance education and research and allocates funds in a given year to universities where the previous year's allocation was low (unallocated)**.
  - = > As a result, expenditure is being **allocated equitably**. (Of course, many research projects are multi-year, and it is necessary to take this cycle into account.)
- The truly desirable role played by **Special grant to enhance education and research** can be considered to be the **buffer role** of managing inexpediencies that arise as a result of the introduction of rules to streamline grants. It serves as a pork barrel budget.
- **Accountability is necessary to ensure the transparency of review methods and verify the results.**

# Special grant to enhance education and research and Existing Performance Indicators (Addendum)

Is there a relationship between allocation of Special grant to enhance education and research and performance indicators?

◇ Explained variable

Competitive portion of grants per student/faculty member

→ 2005 and 2006

◇ Explanatory variables

**Educational indicators:** No. of faculty/No. of students; Educational expenditure/No. of students

**Research indicators:** Research expenditure/No. of faculty; (Articles in English + Articles in Japanese)/No. of faculty;

No. of scientific research grants accepted/No. of faculty; No. of patents published/No. of faculty

**Social contribution indicators:** Profit from contract projects, etc. (excl. from national government)/No. of faculty;

Profit from donations/No. of faculty

→ Financial data from each national university corporation, MEXT website, and Jibu et al., "Financial Analysis of All National Universities in Japan." (Jan. 2008)

# Results

## ◎ Educational indicators

Special grant to enhance education and research/Students		
	Coefficient	P-value
Constant	612000000	0.000***
No. of Faculty/No. of Students	4260000000	0.009***
Educational expenditure/No. of students	-2088395	0.002***
Adjusted R-squared	0.064	

## ◎ Research indicators

Special grant to enhance education and research/Faculty		
	Coefficient	P-value
Constant	-47184165	0.342
Research expenditure/No. of faculty	210537	0.000***
Articles in English + Articles in Japanese/No. of faculty/No. of faculty	-253000000	0.007***
No. of scientific research grants accepted/No. of faculty	-26203207	0.524
No. of patents published/No. of faculty	126000000	0.882
Adjusted R-squared	0.348	

## ◎ Social contribution indicators

Special grant to enhance education and research/Faculty		
	Coefficient	P-value
Constant	-93197559	0.072
Profit from contract projects, etc. (excl. from national government)/No. of faculty	526	0.008***
Profit from donations/No. of faculty	438	0.000***
Adjusted R-squared	0.259	

\*\*\*, \*\*, \* means significant at the 1, 5 and 10 percent levels, respectively.

# Summary of Analysis Results

- **Results :**
- **For educational indicators, allocation depended on faculty more than educational expenditure.**
- **For research indicators, allocation depended on number of articles more than research expenditure.**
- **For social contribution indicators, allocation depended on contract profits and donation profits.**
- **= > From these results, we are able to confirm the trends in the allocation of educational research expenditure, but it is not possible to discuss the pros and cons.**
- **There is a need for transparent discussion in future.**

## (4) Remaining Topics

- ◎ In the future, **creation of indicators** will be crucial for performance-based allocation.
- ◎ Maintaining information for research indicators is relatively feasible, but it could also be argued that research can take place with external funds or Japan Society for the Promotion of Science funds.  
=> In that case, one issue is **separation of educational and research expenditures**.
- ◎ **It will be necessary to maintain information for educational indicators.** Evaluation of educational programs, surveys of student satisfaction levels: refer to overseas case examples. (Australia: LTPF)
- ◎ **Maintaining information for social contribution indicators will be crucial (the key point is to grasp areas that are not reflected in research performance).** => At regional universities where research performance can be expected to be comparatively low, the question of how much social contribution indicators they possess will determine the importance of the existence of regional national universities. <= **Crucial importance of maintaining information for social contribution indicators.**
